

Project Document - Guidelines

Project Report

As part of the Program, a learner has to undertake a Project in an area of their Elective (Specialization) and submit a report. The project provides an opportunity for the students to apply classroom learning and practice in an industry environment. The research has to be conducted by a learner as an independent and individual study. project may be based on a specific organization or a general area in which the learner wants to conduct an in-depth study. **The duration of the project is 8 weeks during which the learner is expected to complete the research and Upload the report on LMS in the prescribed format.** Learners are encouraged to convert their research study into a research paper/case and publish it in association with a mentor.

General Guidelines

- The project may be a **descriptive study, empirical or exploratory** one. A sample list of research topics is provided in Annexure – 1 to assist the learner with a better understanding of areas of research.
- For a learner It is not mandatory to conduct the study in any Organization. Thus, it is not mandatory to provide an Organization/Company Certificate in the Project report. However, if a learner wishes to take up a study for an Organization, it is mandatory to obtain prior permission from the concerned Organization to conduct the study.
- Learner must ensure that the project undertaken is an **original study**.
- The research can be based on either **primary data or secondary data** depending on the relevance of the study.
- A learner should **upload a synopsis of the research study as per the timeline given in the Calendar of Events**. The format of the synopsis is provided in Annexure– 2.
- A learner should **upload an Interim Report (Presentation/PDF file) on the research methodology as per the timeline given in the Calendar of Events**. The format of the Interim report is provided in Annexure - 3
- A learner should Upload a **five-minute video presentation of the project** in the format provided in Annexure – 4
- The **Project report should be uploaded in the prescribed format** as per Annexure – 5
- After completing of the report learner should **check the plagiarism and attach the summary of the plagiarism report in the Project report at the end**. The similarity index permitted is **20%**, beyond 20% of the similarity index the project will not be considered for evaluation.

- Learners are encouraged to convert their research study into a research article by taking mentorship from a research guide allotted by the University.
- It is mandatory to provide references for any external data/ articles/ websites/ books/ journals etc. that have been used in the research. The references have to be provided in APA format.

Assessment

Assessment of performance in the Project is based on:

- Project Synopsis (Weightage 15%)
- Interim Report (Weightage 15%)
- Five-minute Video presentation on the project (The video should focus on the Objectives, Methodology, Project Outcomes, and Learning Aspects) (Weightage 20%)
- Report Evaluation (Weightage 50%)

The assessment of the Project report will be according to pre-defined Rubrics based on performance indicators like Relevance of the study undertaken, Similarity Check (Plagiarism), Quality of References, Continuity of Work, Attainment of Learning Outcomes, and Overall Quality in terms of the potential of Publishing/ Patenting. **The learner has to upload the Project report on the LMS platform in prescribed format.** Every learner should also additionally provide a No Objection Certificate of the study being published or patented under the name of JAIN (Deemed-to-be University). A learner shall be declared to have passed in project if he/she secures:

- i) **A minimum of 40% marks in aggregate (Project Synopsis, Interim Report, Report Evaluation and Five-minute video presentation)**

Allocation of Research Guide

A Research Guide will be allotted to a learner who intends to parallelly convert the Project into a research publication in the prescribed journal (refer to Annexure – 4 for a list of prescribed journals). The research article will be published in the joint name of the learner along with the research guide under the aegis of JAIN (Deemed-to-be- University). The publication charges, if any, have to be borne solely by the learner. The learner is required to be in contact with the guide via the project guidance sessions conducted on every alternate Saturday/Sunday and follow the timelines provided in the Calendar of Events. You can refer to the guide list on LMS.

Rejection of the Project Report

A report can be rejected on the following grounds:

- If it is found that it is **not an original work** of the learner.
- If the **data used is inaccurate or outdated**.
- If the **analysis is incorrect**.
- If the **format used is not as per University guidelines**.
- If the **timelines are not met** by the learner.
- If the **similarity index is beyond 20%**.

Project Journey

For effective research study and proper utilization of time, it is advised that the learner follows the following schedule and timeline:

Week No.	Activity
1	Literature Review and Gap Analysis
2	Finalization of Title and Submission of Synopsis
3 and 4	Data Collection
5 and 6	Data Analysis, Interpretation and Findings
7 and 8	Final Report Writing and Submission

Annexure 1: Sample Topics

Sl. No.	Elective	Title of the Project
1	CSIT	1. Intelligent Chatbot for Customer Support - Develop an intelligent chatbot that can understand and respond to customer queries in real-time. - Improve customer support services by providing accurate and timely assistance. - Enhance customer satisfaction and reduce response times through automated chatbot interactions. 2) Intelligent Traffic Management System using IoT - Develop an intelligent traffic management system that leverages IoT devices and sensors for real-time traffic monitoring and optimization. - Improve traffic flow, reduce congestion, and enhance transportation efficiency. - Enable data-driven decision-making and adaptive traffic control mechanisms. 3) Intelligent Document Management System - Develop a system for intelligent document management, including indexing, search, and retrieval of documents. - Improve document organization, accessibility, and collaboration within organizations. - Enable efficient document processing, metadata extraction, and automated workflows. 4) Robotic Process Automation (RPA) for Workflow Automation - Implement robotic process automation techniques to automate repetitive tasks and workflows. - Improve operational efficiency, reduce errors, and save time and resources. - Enable organizations to focus on more value-added activities by automating routine and rule-based processes. 5) Intelligent Recommendation System for Online Learning - Develop an intelligent recommendation system for personalized online learning experiences. - Improve learner engagement and outcomes by suggesting relevant courses, resources, and learning paths. - Enhance the effectiveness of online education platforms through adaptive and tailored recommendations. 6) Online Food Ordering and Delivery Platform Increase the number of registered users by 20% within six months through targeted marketing campaigns. - Reduce the average delivery time by 15% by optimizing the order fulfilment process and improving logistics.

		• Improve customer satisfaction by achieving a minimum rating of 4.5 out of 5 stars in customer feedback.
		7)Online Learning Management System for Educational Institutions • Increase the student enrollment by 15% within one year by promoting the online learning platform to prospective students. • Improve course completion rates by 20% through implementing interactive learning materials and engagement features. • Enhance learning outcomes by achieving an average student satisfaction rating of at least 4 out of 5.

	DAAN	1) Sentiment Analysis of Social Media Data for Brand Reputation Management - Analyze social media data to understand the sentiment towards a brand or product. - Identify trends, patterns, and topics that influence brand sentiment. - Provide insights and recommendations for improving brand reputation and addressing customer concerns. 2) Customer Segmentation for Targeted Marketing Campaigns - Segment customers based on their demographic, behavioral, and transactional data. - Identify distinct customer groups to enable targeted marketing strategies and personalized messaging. - Evaluate the effectiveness of different segmentation approaches and develop actionable marketing insights for each segment. 3) Text Classification for News Categorization - Develop a text classification model that can categorize news articles into different topics or genres. - Improve content organization and retrieval by automatically assigning relevant categories to news articles. - Explore techniques to handle ambiguous or multi-label categorization scenarios. 4) Predictive Analysis for Healthcare Resource Planning - Develop a predictive model to forecast healthcare resource Improve resource allocation and capacity planning to ensure efficient healthcare service delivery. - Utilize historical data and external factors to predict future demand and make informed decisions for resource management. 5) Predictive Analysis for Traffic Flow and Congestion Management - Develop a predictive model to forecast traffic flow and congestion patterns. - Improve traffic management and optimize transportation infrastructure planning. - Provide real-time insights for traffic control, route optimization, and urban planning.
	CYSE	4) Cyber Threat Intelligence Analysis and Visualization Collect and analyze cyber threat intelligence data from

		various sources to identify emerging threats and trends. • Develop visualizations and dashboards to facilitate threat analysis and decision-making. • Provide actionable insights for proactive threat hunting and risk mitigation strategies. 5) Privacy-Preserving Techniques for Data Anonymization • Implement privacy-preserving techniques such as differential privacy, k-anonymity, or homomorphic encryption. • Protect sensitive information while maintaining data utility and usefulness for analysis. • Evaluate the effectiveness and trade-offs of different anonymization methods for data privacy. 6) Cyber Threat Hunting using Big Data Analytics • Utilize big data analytics techniques to detect and investigate advanced cyber threats and attack patterns. • Develop models and algorithms to identify anomalous behavior and potential indicators of compromise. Enhance the organization's ability to proactively hunt for and respond to sophisticated cyber threats.

Annexure 2: Synopsis Format Project

Synopsis (weightage 15%)

- Title
 - A self-explanatory title should be associated with your research objective.
- Problem Statement
 - Introduces the primary research topic or problem statement and the specialized niche within which the learner will conduct the research. □

Objectives of the Research

 - Should clearly indicate the objective of the research, as well as the significance of the chosen project.
 - The final objective is a statement describing the learner's contribution to the field of study.
- Research Methodology
 - Provides a brief overview of the methodology.
 - Type of Research (Descriptive/ Exploratory/ Empirical)
 - Data Collection Methods (Primary/ Secondary)
 - Limitations
 - Provides an understanding of the subject knowledge by specifying aspects of the problem that will not be addressed by this research study
 - Provide an outline of planned research tasks that will be conducted during the eight weeks of the project.

Annexure 3: Interim Report (Weightage 15%)

A Presentation or a PDF file of the Research Methodology covering the following points should be uploaded on LMS:

- Objectives of the Study
- Scope of the Study
- Methodology
- Research Design
- Data Collection Method
- Sampling Method (if applicable)
- Data Analysis Tools

4: Video Presentation Format Video Presentation (Weightage 20%)

A **5-minute** video presentation of the project covering the following points should be uploaded on LMS:

The Presentation should focus on the following:

- Project Objectives
- Research Methodology
- Project Outcome (Findings, Conclusion, and Recommendations)
- Learning Aspects

Annexure 5: Report Format Project

Report (Weightage 50%)

The Project report should be between **45 – 65 typed pages**. An indicative number of pages for each chapter is given below for your reference. The Project Report Must be uploaded on LMS.

Chapter No.	Title	No. of Pages
I	Introduction and Background	9 to 15
II	Review of Literature	9 to 12
III	Research Methodology	3 to 5
IV	Data Analysis and Interpretation	20 to 25
V	Findings, Recommendations and Conclusion	3 to 5

A. Preliminary Section

- Title Page
- Company Certificate (if applicable)
- Declaration of the student
- Acknowledgment
- Executive Summary
- Table of Contents
- List of Tables
- List of Graphs

B. Main Section

Chapter I Introduction and Background

- 1.1 Purpose of the Study
- 1.2 Introduction to the Topic
- 1.3 Overview of Theoretical Concepts
- 1.4 Company / Domain / Vertical / Industry Overview
- 1.5 Environmental Analysis (PESTEL Analysis)

Chapter II Review of Literature

- 2.1 Domain/Topic Specific Review

2.2 Gap Analysis

Chapter III Research Methodology

3.1 Objectives of the Study

3.2 Scope of the Study

3.3 Methodology

- Research Design
- Data Collection
- Sampling Method (if applicable)
- Data Analysis Tools

3.4 Period of Study

3.5 Limitations of the Study

3.6 Utility of Research

Chapter IV Data Analysis and Interpretation

Tables, Charts, Analysis and Interpretation

Chapter V Findings, Recommendations and Conclusion

5.1 Findings based on observations

5.2 Findings based on analysis of data

5.3 General findings

5.4 Recommendations based on findings

5.5 Suggestions for areas of improvement

5.6 Scope for Future Research

5.7 Conclusion

C. EndSection

- Bibliography
- Appendices
- Annexures

Format to be followed for the Report

There should be consistency of style in terms of margins, page numbers, paragraphs,

bulleted lists, numbered lists, the font used in headings, and so on.

- Margins: Left 25mm (1"), Top 25mm (1"), Right 25mm (1"), Bottom 25mm (1")
- Font: Times New Roman
- Font Size: 14 points for Headings (boldface) and 12 points for body text
- Text Alignment: Centre for Heading and Justified for body text
- Line Spacing: 1.5
- Page Number: At the Bottom in the Middle of the Page (Start Page Number from the Main Section)
- Figures and Tables – Centered placed. Titles and Headings used for tables, graphs and other illustrations should be standardized and also be numbered sequentially.

Annexure 6: Prescribed List of Journals

- UGC Care List Journals
- Web of Science Journals
- Scopus Indexed Journals
- ABDC Journals
